

Current Graduate Course Descriptions
Updated October 2011

FN 9111a/b – Current Issues and Controversies in Foods and Nutrition

An advanced study of topical/current issues and controversies in foods and nutrition in health and disease

FN 9222a/b – Research Methods and Statistics

The course will provide students with advanced training in research methods and statistics used in nutrition research. Nutrition research plays a vital role in setting professional practice standards and health policy and in determining the role of nutrition in health and disease prevention

FN 9555a/b – Contemporary Issues in Foodservice Administration

A review of practice-based research and experience-based issues in Food Services Administration and management, related to healthcare, retail, and educational environments

FN 9711a/b – Nutritional Epidemiology

Introduction to principles of epidemiology and their application to nutrition; this course deals with the design, conduct, analysis, and interpretation of epidemiologic studies related to nutritional status, diet and disease relationships. Emphasis is placed on population-level dietary and nutritional status assessment, impact of methods and study designs on interpretation of and conclusions from research

FN 9722a/b – Program Planning and Evaluation

Concepts and knowledge of nutrition program planning and evaluation; examination and review of current nutrition programs, principles and policies in population health theory and practice; emphasis is placed on critical analysis of current strategies that address the nutritional needs of population groups
